

Got an iPad? Then you've got a toolbox that you can fill to help you be an even better teacher!

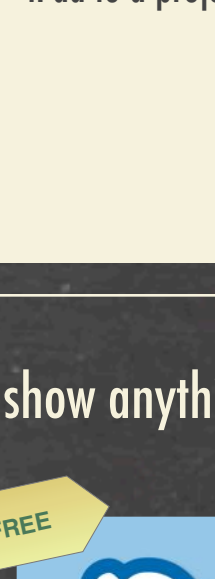

iPad as the TEACHER'S PET

Infographic by Tony Vincent
learninginhand.com/pet

Let students see what you see on your iPad's screen by **mirroring** it to a projector. You have several options when it comes to mirroring...

SHOW on a big screen

WIRED

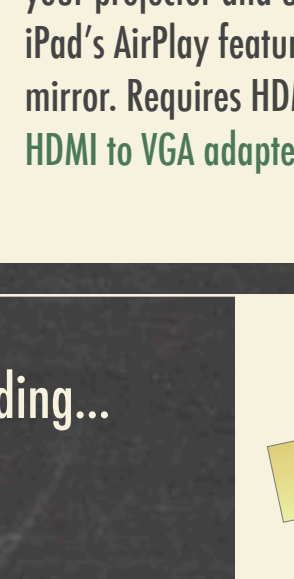

Connect directly from your iPad to a projector.

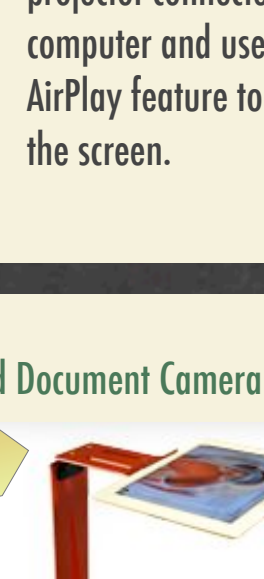

Install software on your projector-connected computer and attach iPad using its USB cable.

WIRELESS

Requires devices to be on the same WiFi network. Network must have open ports for AirPlay.

Connect on Apple TV to your projector and use iPad's AirPlay feature to mirror. Requires HDMI or HDMI to VGA adapter.

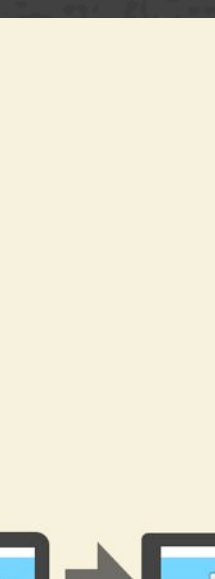

Install software on your projector-connected computer and use iPad's AirPlay feature to mirror the screen.

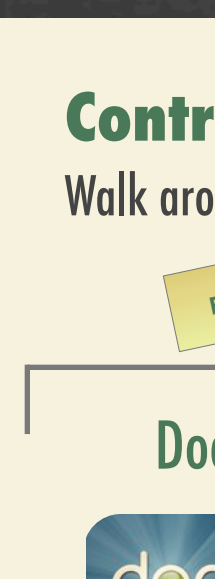

Install software on your projector-connected computer and use iPad's AirPlay feature to mirror the screen.

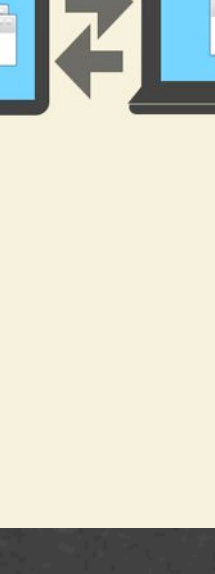

When your iPad is mirrored to a projector, you can show anything that runs on your iPad, including...

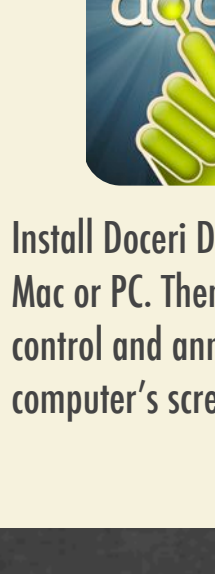

Draw and annotate over saved images or over photos you take with the camera.

Make colorful concept maps that can include text, images, and drawings.

Create and use interactive slide decks. You can even import many existing SMART Notebook files.

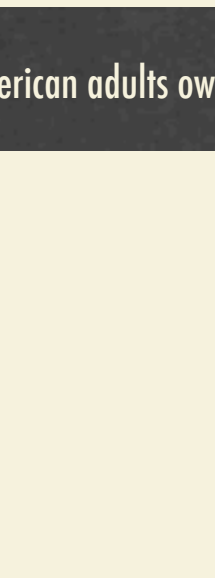

Use iPad's camera to display live video of objects, textbooks & student work. Sketch, write, label, or point over what the camera sees in real time.

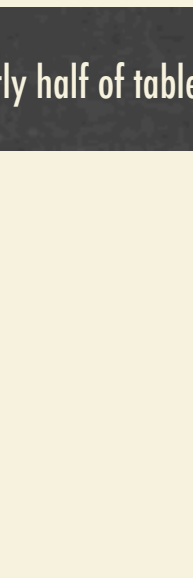

The Stage Whiteboard app can help turn iPad into a document camera. For best results buy, find, or improvise a stand for your iPad.

Control your projector-connected computer wirelessly. Walk around the room while you can see and use your Mac or PC on your iPad.

Install Daceri Desktop on your Mac or PC. Then use Daceri to control and annotate your computer's screen.

Set VNC server settings on your Mac or PC. Then access that computer from your iPad.

Install Splashtop Streamer on your Mac and PC. Then access that computer from your iPad.

Not only can you view and control your computer, but you can draw, highlight, write, and spotlight.

MANAGE the classroom

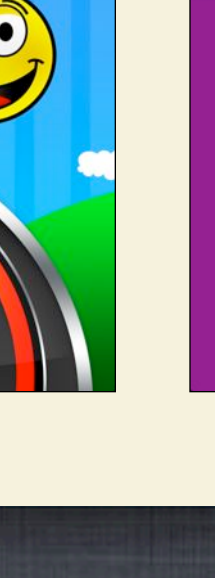

Use your iPad to randomly select students, monitor noise levels, display messages, track behavior, and count down time. These apps are free of charge unless otherwise noted.

Input student names into Random Name Selector then draw them randomly out of a hat.

Too Noisy displays the noise level in the room on a gauge. When the noise increases, the face becomes sad.

Display a colorful message by entering text into Sign++.

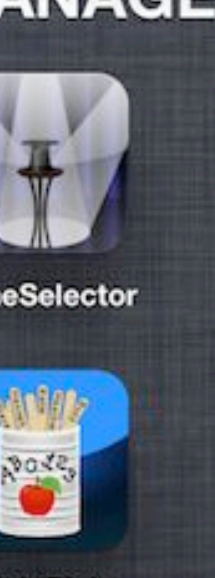

Enter Text into iBanner HD to create a scrolling light-up sign.

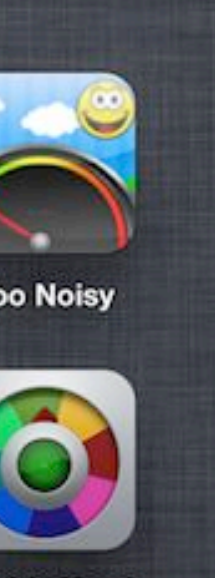

Use ClassDojo to track student behavior by awarding and subtracting points.

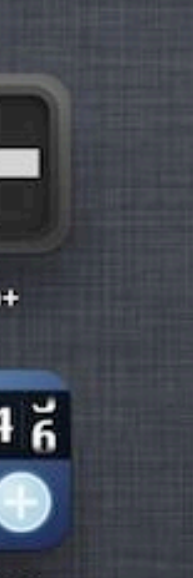

Pick a student at random by giving your iPad a shake or tapping the screen in Stick Pick. You can record how well students respond.

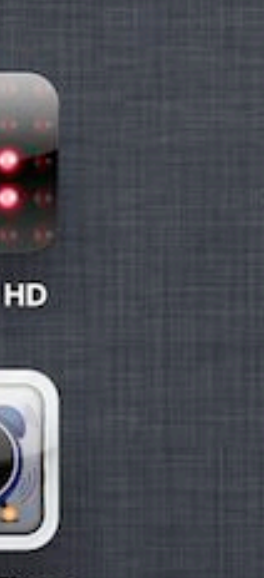

Use Decide Now! to create a wheel of options. Spin it to randomly select from the options. Use for class reviews, lesson extensions, math problems, etc.

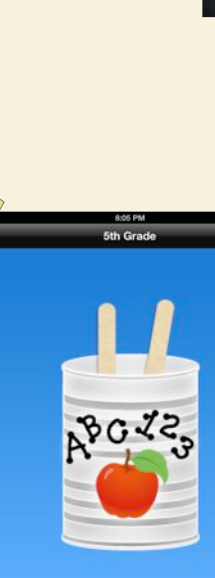

Counter+ is a replacement for mechanical counters. Use it to count students, behaviors, responses, accomplishments, etc.

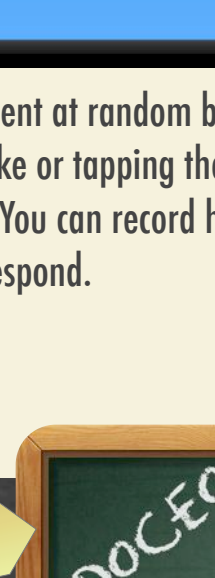

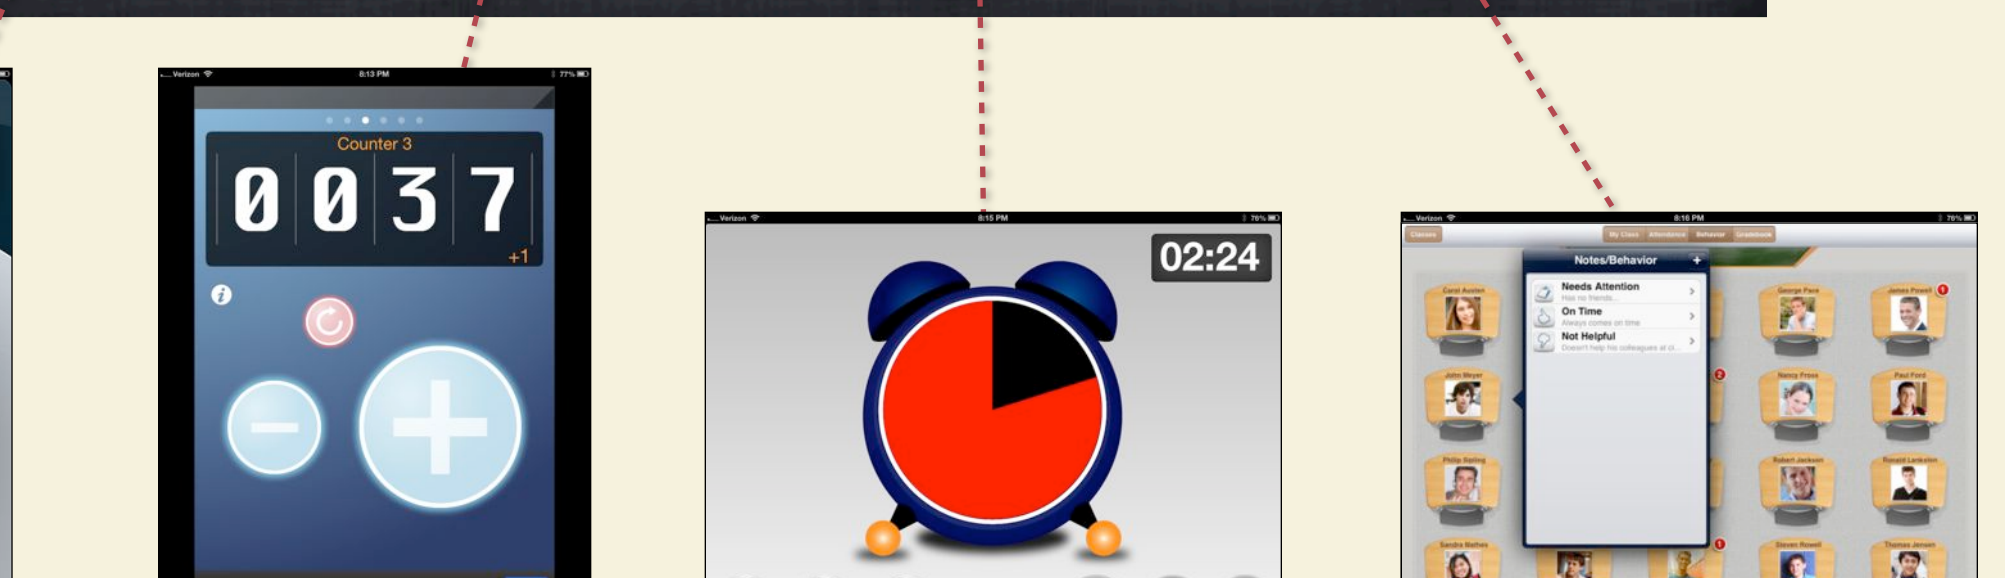

Put a large countdown timer on display. Classroom Timer shows a visual countdown as a pie chart.

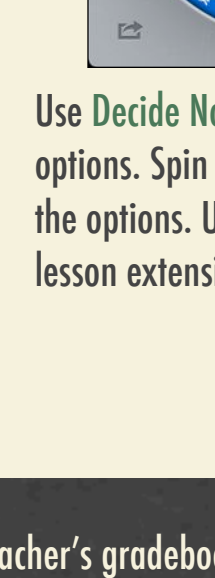

TeacherKit is a personal organizer. Add classes and students. Then take attendance note behavior, take grades, and make seating charts.

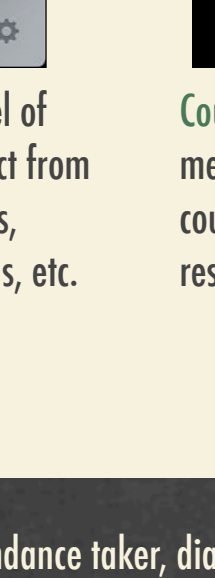

iDoozo is a teacher's gradebook, timetable, attendance taker, diary, and resource manager.

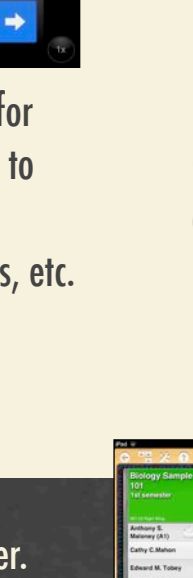

Pick a student at random by giving your iPad a shake or tapping the screen in Stick Pick. You can record how well students respond.

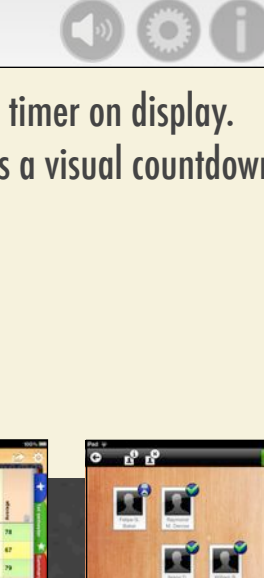

Use Decide Now! to create a wheel of options. Spin it to randomly select from the options. Use for class reviews, lesson extensions, math problems, etc.
